DETAILED ACTION

1. This communication is the first Non-Final action in regard to application No. 09/883,897 filed on June 18, 2001.
2. Claims 1-25 are presented for examination, of which claims 1, 13 and 15 are Independent Claims.
3. Claims 1-12 and 15-25 are allowed over the prior art of record.
4. Claims 13-14, are rejected under 35 U.S.C. 102(b).

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 13-14, are rejected under 35 U.S.C. 102(b) as being anticipated by Bruce A. Cole (U.S. Patent No. 5,854,901 and Cole hereinafter).

Regarding Claim 13, Cole discloses

a namespace ^{Field}files representing a network file name for a remote file¹

(Abstract), i.e.

¹ Please note that "a network file name" as in the current Claim 13 can be interpreted to any URL or Website name on the Internet network.

Art Unit: 2171

The IP domain name is used to initiate the address discovery in the endpoint

(Col 3, Lines 21-22), i.e.

The user enters a preselected URL "http://new-router.cisco.com/" into the web browser 16.

(Col 3, Lines 29-30), i.e.

a DNS header including a broadcast DNS server address 40 and the preselected IP domain name 38 (new-router.cisco.com)

a unique file identifier

(Col 3, Lines 25-28), i.e.

Thus, the DNS request packet 22 is transmitted in an IP format and broadcast to all devices on network 20. The IP packet header includes an IP source address.

(Abstract), i.e.

the proposed IP address constitutes a unique address on a network segment.

(Col 1, Lines 13-21), i.e.

Devices connected on a network, such as routers and personal computers (PCs), must be assigned unique internet addresses in order to communicate with other systems over the internet. In order to assign and configure an IP address on a router, a system administrator typically connects a personal computer (PC) into a special serial port on the router. The system administrator manually identifies a unique IP address and then downloads the IP address through the PC to the router.

Art Unit: 2171

Regarding Claim 14, Cole discloses universal file identifiers²

(Abstract), i.e.

the proposed IP address constitutes a unique address on a network segment.

(Col 1, Lines 13-21), i.e.

Devices connected on a network, such as routers and personal computers (PCs), must be assigned unique internet addresses in order to communicate with other systems over the internet. In order to assign and configure an IP address on a router, a system administrator typically connects a personal computer (PC) into a special serial port on the router. The system administrator manually identifies a unique IP address and then downloads the IP address through the PC to the router.

Allowable Subject Matter

7. Claims 1-12 and 15-25 are allowed over the prior art of record.
8. The following is the Examiner's statement of reasons for the indication of allowable subject matter:

Regarding Independent Claims 1 and 15, Applicant's particular method and associated system in a client-server environment is purging from a client-side "delayed close list" only the cache open files with a unique identifier that is not the file name which matches the same unique identifier of a target file in a remote server in combination with the other limitations of the claims, was not disclosed by, would not

² Please note that IP addresses are known to be uniquely assigned across the Internet network as identifiers of Websites and WebPages (Files).

have been obvious over, nor would have been fairly suggested by the prior art of record or that encountered in searching of the prior art.

The dependent Claims 2-12 being further limiting to independent Claim 1; and dependent Claims 14-25 being further limiting to independent Claim 15; definite and enabled by the Specification are also allowed.

Other Prior Art Made of Record

9. A. Chlanet al. (U.S. Patent No. 6,385,642) discloses Internet web server cache storage and session management system;

B. Kishi et al. (U.S. Patent No. 6,067,599) discloses time delayed auto-premigration of files in a virtual data storage system;

C. Caccavale (U.S. Patent No. 5,892,937) discloses real-time data cache flushing threshold adjustment in a server computer;

D. Caccavale (U.S. Patent No. 5,819,033) discloses system and method for dynamically analyzing and improving the performance of a network;

E. Caccavale (U.S. Patent No. 5,742,819) discloses system and method for dynamically analyzing and improving the performance of a network; and

F. Caccavale (U.S. Patent No. 5,732,240) discloses real-time data cache size adjustment in a server computer.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.
